Assignment/Project/Exam Grading

Teodor Rus

August 18, 2011

To be graded, your self-selected projects/problems need to be specified, resolved, and submitted for grading in view with the following grading rules:

1. Formulate the problem (25% of the grade);

2. Provide a solution (an algorithm, the sketch of a program, a natural language explanation, etc.) (25% of the grade);

3. Implement the solution you specified at (2) above (25% of the grade);

4. Provide a user manual for your solution implementation (25% of the grade). The user manual must contain the following information:
   (a) Where is the program you have implemented;
   (b) How to compile the program you have implemented;
   (c) How to run the program you have implemented;
   (d) Give information about program behavior. If there is no such information, just state that there is no such information.
